Order discounts

Every order gets a discount on its subtotal based on the customer's loyalty tier:

Tier	Discount
Bronze	0%
Silver	5%
Gold	10%

The order's **total** is the subtotal minus this discount, rounded to 2 decimal places. A customer with no loyalty account is treated as Bronze.

Loyalty bonus

Every purchase earns the customer loyalty points, at a rate that depends on their current tier:

Tier	Points per \$1 spent
Bronze	1
Silver	1.5
Gold	2

Points accumulate across purchases. When a customer's total points cross a threshold, their tier is upgraded immediately (the purchase that crosses the threshold already earns points at the **new** tier's rate for any remaining fraction of the purchase — for this manual's purposes, applying the new tier's rate to the whole purchase that crosses the threshold is acceptable):

Points threshold	New tier
500	Silver
2000	Gold

Tiers never downgrade.
